

Sidit Srivastava

AI Full Stack Software Developer (React.js, TypeScript, Node.js, Python)

Gurugram, Haryana, India | +91-6392580612 | siditsrivastava84@gmail.com

LinkedIn | Github

Professional Summary

AI Full-Stack Developer with 2 years of experience building and maintaining production web applications with **React.js**, **TypeScript**, **JavaScript (ES6+)**, **Redux Toolkit**, **Node.js** and **Python (FastAPI)**. Delivered 3 client projects: the frontend of a real-time **WebSocket** trading platform, an **AI email-generation** feature for an email automation platform, and a **RAG**-based data copilot with **Highcharts** visualizations built on **Python**, **LangChain** and **LLMs**. Strong at **REST API** integration, **state management**, component-based architecture, real-time data streaming, **performance optimization**, **debugging** and production support inside existing codebases to deliver reliable releases.

Work Experience

Full Stack Software Developer | WeBuildTech, Gurugram, Haryana Dec 2024 – Present

Real-Time Trading Platform (Client Project, Frontend)

- Engineered the frontend of a real-time trading platform with **React.js**, **Redux Toolkit** and **WebSocket** to show live market-data updates in the UI without page refreshes.
- Optimized state management, rendering performance and data flow so frequent market-data updates stayed smooth and responsive for users.
- Integrated **REST APIs** with **Axios** for profile management, market data, transaction history and application workflows, giving reliable communication with the backend.

Email Automation Platform (Client Project)

- Developed and maintained end-to-end features across the frontend (**React.js**, **TypeScript**) and backend of a client email automation platform, building backend **REST APIs** with **Python** and **FastAPI** within an existing production codebase.
- Built an AI-powered email generation feature that automatically drafts emails based on the recipient's status and the purpose of the message, so users no longer write each email manually and can send faster.
- Studied the existing architecture, business logic and coding patterns before building new features, so changes fit established conventions and shipped cleanly.
- Investigated and fixed production issues across the **React.js** UI, **Python/FastAPI** backend, API integrations and data flow, contributing to stable and reliable releases.

AI Data Copilot (Client Project)

- Built an AI-powered data copilot for a client using **Python**, **LangChain**, **RAG** and **LLMs** that analyzes the database and presents insights to users in a simple, easy-to-understand way.
- Built the frontend with **React.js** and **TypeScript**, visualizing data with **Highcharts** charts and graphs so non-technical users can grasp trends and results at a glance.
- Enabled users to ask questions in natural language: the copilot queries the database, finds the relevant values and returns them in a clear format with a short summary.

Internal Enterprise Management System

- Built the frontend with **React.js** and **Redux Toolkit** (reusable UI components, scalable architecture, structured state management) and the backend with **Node.js**.

Technical Skills

Frontend: React.js, TypeScript, JavaScript (ES6+), Redux Toolkit, TanStack Query, Highcharts, HTML5, CSS3, Tailwind CSS

Backend & APIs & Database: Python, FastAPI, Node.js, REST APIs, WebSocket, Axios, SQL

GenAI: LangChain, RAG (Retrieval-Augmented Generation), LLMs

Tools: Git, GitHub, Chrome DevTools

Concepts: State Management, Component-Based Architecture, API Integration, Real-Time Data Streaming, Performance Optimization, Debugging, Production Support

Education

Master of Computer Applications (M.C.A.) | Babu Banarasi Das University

Aug 2021 – Jul 2023

Training

Full Stack Web Development Program | Masai

2023 – 2024

- Completed an intensive full-stack program covering React.js, Redux Toolkit, JavaScript (ES6+), Node.js, SQL and REST API design.
- Built full-stack applications through hands-on, project-based learning.
